

Truven Meridian

One trusted standard across every source, every team, every decision.

Organizations paying for care have more healthcare data than ever. What that data usually lacks is a shared standard behind it — the methods, benchmarks, and definitions that make healthcare data decision-grade. Without one, teams work from different answers, reports disagree, and time disappears into reconciling whose numbers are right.

That standard has always existed at Truven. It has simply lived inside an application, reaching only the data that lived there.

Meridian makes it accessible. It applies that same rigor to every source you hold, elevates them all to one reference point, and keeps them current — so trusted data reaches the people and tools that need it. Hosted by Truven in a secure, HIPAA-compliant environment or delivered into your own cloud, the standard is identical either way.

Why we call it Meridian

A meridian is two things at once. It is the fixed reference line every map and every navigator measures against. It does not shift with the terrain. That is alignment — one trusted reference point, so every team works from the same place.

A meridian is also the highest point, the summit of the arc. That is elevation — every source raised to its full potential rather than left at the quality of its rawest inputs.

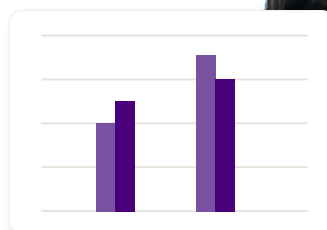

The peak your data was built to reach, and the line every decision aligns to.

Moving data is not the same as elevating it

Most healthcare data offerings move data. Meridian applies a standard to it — the difference between receiving data in the condition it arrived and receiving data that has been elevated, enriched, benchmarked, and consistently defined.

That difference shows up in the efficiencies you gain. With typical delivery, it takes time to build and maintain the analytic logic that makes the data usable, and the extract it is built on begins aging the moment it lands. Meridian arrives with proven methods and groupers, differentiated measures, and trusted benchmarks that the healthcare market already references, all maintained and refreshed on a regular cycle, so teams can move beyond raw data access and spend less time rebuilding and reconciling datasets.

It also shows up in what you are measured against. Because Truven is not tied to a competing book of business or insurance economics, MarketScan benchmarks reflect the broader market — so you see where you actually stand, not where a single carrier's footprint suggests you do.

What changes for your teams

Trusted, analytics-ready healthcare data.

Standardized and enriched with proven methodologies, groupers, benchmarks, measures, and risk models.

Ready-to-use healthcare intelligence.

Access curated measures across financial, clinical, population health, pharmacy, utilization, provider performance, benchmarking, and operational insights.

Accessible where your teams already work.

Trusted, query-ready data reaches the tools your teams use today. No application to adopt, no analytics to rebuild.

Current, not captured once.

A maintained standard, refreshed on a regular cycle.

Consistent as you grow.

The same standard applied to every source you add, every refresh, and every team that relies on it.

What the standard is built on

Meridian is built on the same foundation Truven has maintained for four decades.

- **450+ data suppliers**, for breadth of sourcing across the full continuum of care.
- **25,000+ data files ingested monthly**, for a continuously refreshed foundation rather than a static set.
- **Trusted by 7 of the top U.S. health plans** and more than 40% of the Fortune 500.
- **Provenance you can trace**, with methods documented and auditable, so every answer shows what it is built on.

ONE REFERENCE POINT, ONE SET OF NUMBERS

One trusted reference point across every source you hold, so teams across your organization move forward on the same defensible numbers.
