

We're enhancing the IV Compatibility experience to make it easier to find and interpret compatibility information. The trusted clinical content remains unchanged. This update focuses on improving usability, reducing clicks, and helping clinicians find answers more efficiently.

1. **One search bar instead of two:** A single search bar simplifies the process of building compatibility searches

2. **A redesigned results table:** Results are now displayed in a cleaner, more scannable table for faster review
3. **Improved filtering options:** Filters have been updated to be more accessible
4. **Search within a search:** Add or remove directly from the results page without having to navigate away
