

## QUICK REFERENCE GUIDE

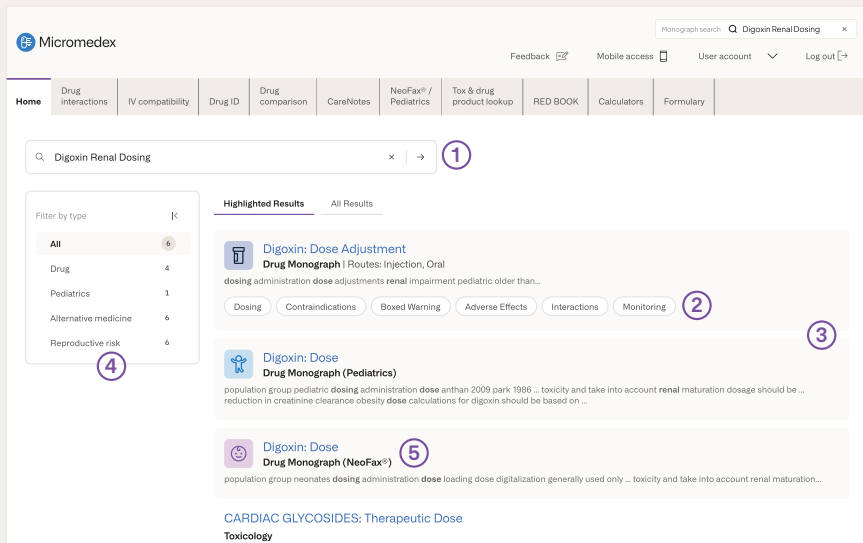

# Micromedex smarter search

Fewer clicks. More relevant answers.

## Improved results by relevance

Traditional keyword-based tools often fall short in their responses to multi-word searches and more complex queries. Micromedex search now better supports real-world clinical queries — including multi-word searches and non-exact-match terms.

The result: faster access to more relevant answers from trusted Micromedex content.

A modernized search results page that prioritizes the most relevant results and is easier to scan, evaluate and act upon.

1. Easier to search for new terms
2. New 'quick links' reduce clicks
3. Improved visual division between results
4. Clear visuals, better use of white space
5. Updated labeling for clearer information

## What's improved

- Better support for multi-word searches - helps users search the way they naturally think and work.
- More relevant results - surfaces useful content faster from trusted Micromedex content.
- Fewer clicks - quick links help users refine or deepen searches without starting over.
- Easier-to-scan results page - improved spacing, labeling, and visual separation reduce effort.
- Less reformulating search and scrolling results - designed to help users get to the right answer faster.

## Why it matters

Clinical search should not slow you down — even when the query is more complex. Micromedex pairs trusted clinical content with smarter search technology to help users find relevant answers faster.
