Patient Education: Translated Titles by Language

Last Updated: February 9, 2023

CareNotes Titles by Category

Micromedex® Patient Education, featuring Micromedex CareNotes, covers the continuum of care from pre-care, inpatient, and discharge instructions to emergency department and ambulatory education, including topics ranging from disease and procedure to medication education, providing patient-specific education that supports regulatory objectives and improves outcomes. CareNotes delivers a single source of evidence-based patient education materials. These robust documents and tools provide patient-specific information at every stage of care – pre-care, inpatient care, lab tests, continuing care, discharge instructions, drug information, and emergency department education.

Standard medication instructions for patient use include medication names, description, and possible side effects, as well as usage, precautions, interactions, and more for both prescription and non-prescription drugs. This information is designed to reduce adverse effect incidents and enable proper usage for better outcomes. More detailed drug information is also available in expanded content sets.

Translated CareNotes document types include:

- **General Information** - basic overviews about the illness, injury, or procedures
- **Discharge Care** - care instructions for patients discharged from the inpatient setting
- **Micromedex CareNotes AfterCare Instructions** (*not available on all platforms*) - used primarily in emergent care discharge scenarios, covers care and instructions for the patient at the point of discharge
- **Ambulatory Care** - care instructions for patients discharged from the ambulatory care setting
