

Capture digital data directly from clinical trial participants

Zelta eCOA: My Clinical Diary – Electronic clinical outcome assessment

My Clinical Diary is designed to enable clinical trial participants and caregivers to enter diary, survey and outcome information in a way that's aligned with their lifestyle – using a computer, tablet, or smart phone. With My Clinical Diary, you can design patient-centric clinical trials that enhance the participant experience, reduce burden, increase engagement, and improve compliance.

Unified EDC, with built in eCOA

- EDC study designer builds ePRO data collection forms, rules, and schedules directly into the EDC as part of the casebook
- No EDC integration required
- Patient outcomes available without delay
- Adherence feedback available immediately

Bring your own device (BYOD)

- EDC study designer has full control over available modalities – iOS or Android mobile app, mobile friendly responsive web app, or web app experience embedded into native mobile apps
- Device agnostic and ideal for both BYOD, issued device, and hybrid trials

Scalable, adaptable platform

- Adapts to multiple participant access points via both the web and native applications
- Leverage native applications, iOS and Android, and a zero-footprint progressive web application
- Supports small trials in one geography or large trials in multiple geographies, languages and time zones
- Enables dynamic scheduling

Patient-friendly approach

- Make reporting outcomes convenient for the participant
- Alert participants with notifications translated to preferred language
- Outline current and upcoming tasks participants need to complete
- Supports a growing list of over 70 languages and dialects
- Leverage regionalization and controls native to the participant's device

Flexible study design and setup

- Single questionnaire build supports multiple collection modalities
- Zelta support 24/7 for participant users and site personnel
- Assessments can be built and launched within hours
