Micromedex® Patient Education, featuring Micromedex CareNotes, covers the continuum of care from pre-care, inpatient, and discharge instructions to emergency department and ambulatory education, including topics ranging from disease and procedure to medication education, providing patient-specific education that supports regulatory objectives and improves outcomes. CareNotes delivers a single source of evidence-based patient education materials. These robust documents and tools provide patient-specific information at every stage of care – pre-care, inpatient care, lab tests, continuing care, discharge instructions, drug information, and emergency department education.

Standard medication instructions for patient use include medication names, description, and possible side effects, as well as usage, precautions, interactions, and more for both prescription and non-prescription drugs. This information is designed to reduce adverse effect incidents and enable proper usage for better outcomes. More detailed drug information is also available in expanded content sets.

CareNotes document types include:

- **General Information** - basic overviews about the illness, injury, or procedures
- **Inpatient** - basic information about treatment, tests, and medication given during acute care
- **Precare** - preparation and procedural information
- **Discharge Care** - care instructions for patients discharged from the inpatient setting
- **Micromedex CareNotes AfterCare Instructions**¹ (*not available on all platforms*) - used primarily in emergent care discharge scenarios, covers care and instructions for the patient at the point of discharge
- **Ambulatory Care** - care instructions for patients discharged from the ambulatory care setting
- **Medication Instructions** - indications, contraindications, usage instructions, precautions, interaction warnings, and side effects for prescription and nonprescription drugs
- **Micromedex Medication Essential Fact Sheets** - brief Medication Instructions with indications, interaction warning and side effects for prescription and nonprescription drugs

Nurses, pharmacists, and physicians will all benefit from being able to quickly find and share information directly in the workflow. Evidence-based materials on nearly 3000 drug topics and 59 medical specialties will help patients learn critical self-care and medication adherence information, and clinical evidence on more than 480 lab tests will help patients understand their conditions and their treatment more clearly.
